# Add **video** and **content** sharing to your audio conference

## Scalable screens

During the course of the meeting the participants can independently optimize the size of their video and content based on the device used and what they prefer to focus on.

Sometimes the focus of the meeting is on the video conference.

Sometimes the focus of the meeting is on the shared content so screens are resized.

The Personal Library stores documents and media for quick access. Audio controls are available to manage the participant connections.
